DEPARTMENT OF  
NATURAL RESOURCES

## Total Maximum Daily Load Information Sheet

### Baynham Branch Water Body ID: 3240

---

#### Water Body Segment at a Glance:

County:	Newton
Nearby City:	Diamond
Length:	4.0 miles
Pollutant:	Bacteria ( <i>E. coli</i> )
Source:	Rural nonpoint sources

#### Scheduled for TMDL development:

TMDL development schedules are subject to change.

The most current schedule for TMDL development is available on the department's website at [dnr.mo.gov/env/wpp/tmdl/wpc-tmdl-progress.htm](http://dnr.mo.gov/env/wpp/tmdl/wpc-tmdl-progress.htm).

---

#### Description of the Problem

A water body is considered impaired when it fails to meet applicable water quality standards. Water quality standards consist of designated uses, water quality criteria, an antidegradation policy and implementation procedures. Baynham Branch is impaired due to exceedances of the state water quality criterion that protects whole body contact recreation category B.

#### Designated uses of Bass Creek\*

- Warm Water Habitat (WWH)
- Whole Body Contact Recreation Category B (WBC-B)
- Secondary Contact Recreation (SCR)
- Human Health Protection (HHP)
- Irrigation (IRR)
- Livestock and Wildlife Protection (LWP)

\*In addition to these specific uses, all waters of the state are protected by the general water quality criteria that are specified in the state's Water Quality Standards at 10 CSR 20-7.031(4).

#### Designated uses that are impaired

- Whole Body Contact Recreation – Category B

## **Standards that apply**

- Missouri's Water Quality Standards at 10 CSR 20-7.031(5)(C) and Table A state that for waters designated for whole body contact recreation category B, the *E. coli* bacteria count, measured as a geometric mean, shall not exceed 206 counts per 100 milliliters of water during the recreational season. The recreational season is defined as being from April 1 to October 31.

## **Background information and water quality data**

Baynham Branch is a tributary of Shoal Creek in Newton County. The stream is designated as category B for the whole body contact recreation use. The department judges a stream to be impaired by bacteria if the water quality criterion for *E. coli* is exceeded in any of the last three years for which there is adequate data (minimum of five samples taken during the recreational season). High counts of *E. coli* are an indication of fecal contamination and an increased risk of pathogen-induced illness to humans. *E. coli* bacteria data for Baynham Branch were collected in 2010 and 2011. The recreational season geometric mean of these data exceeded the whole body contact category B criterion in both years. For this reason, Baynham Branch has been assessed as impaired by *E. coli*.

## Map of the Baynham Branch Watershed

### TMDL for Baynham Branch

The Baynham Branch TMDL will calculate the maximum amount of each listed pollutant that the stream can receive and still meet water quality standards. The TMDL will also identify all potential or suspected pollutant sources in the watershed and distribute the allowable pollutant loads among those various sources. When developed, the Baynham Branch TMDL will use the most current and available data. For this reason, the final TMDL may present information that differs from that contained in this information sheet.
